

Amendments to the Specification

Please replace the last paragraph of page 4 with the following paragraph:

Fig. 3 4 shows a second, preferred embodiment of the invention. This embodiment requires the addition of GPS diversity antenna 28. Instead of switching off the input signal to GPS receiver 14 during the transmit time slot of cellular transceiver 16, the antenna input circuit of GPS receiver 14 is switched to diversity antenna 28. GPS diversity antenna 28 is not a primary antenna and not critical to this application, so it can be placed at the side, rear or bottom of the phone using a linear, slot or patch antenna.
